-
- 3 Back Cover

End

- 1** Take a base platform and insert two wheels either end, ensuring that they pop into the holes and are secure. Repeat this step with the remaining base platform and two wheels. See the image below.

- 2** Push a lower rail pole into the top of the base platform, ensuring it is held tightly in place. Once done, slide the height adjustment cap onto the lower rail pole and untighten the top. After this, lower an upper rail pole into the height adjustment cap and the lower rail pole. When the upper rail pole is at your ideal size, simply tighten the height adjustment cap. Repeat this with the other base platform. Please see the images below.

- 3** Push both of the base connection poles into the holes found in the side of the completed base platforms. Once done, push the other completed base platform onto the ends of the base connection poles, ensuring that it is secure once it is in. See the image below.

- 4** Attach a corner support onto the top of one of the upper metal poles. Make sure to push it down as far as possible as to avoid it easily becoming loose over time. After this, push the remaining upper metal pole into the corner support. Once done, attach the remaining corner support onto the other end of the upper metal pole and push it down onto the upper metal pole that is inside the height adjustment pole. Please see the image below.
