

Turbo 2kw Convactor Heater C €

USER MANUAL Model No: 3756

Safety Instructions

Notice: Ensure you read and fully understand instructions before use

While every attempt is made to ensure the highest degree of protection in all equipment, we cannot guarantee freedom from injury. The user assumes all risk of injury due to use. All merchandise is sold on this condition, which no representative of the company can waive or change.

- This product is not a toy and should only be used for its designated purpose.
- Make sure no objects are close. The user takes all responsibility for the construction and placement of the product.
- Make sure the Turbo 2kw Convector Heater is out of the immediate reach of children to avoid potential hazards and injuries.
- Never leave the radiator unattended.
- Once you are finished with the radiator be sure to turn it off, leaving it on can be dangerous. Allow to cool before moving/storing.
- To protect against electrical shock, do not immerse cord, plug or any part of this appliance in water or any other liquid.
- Ensure the power supply to the socket into which the appliance is plugged, is in accordance with the rating label on the appliance and that the socket is earthed.
- This product is not a toy, and is only to be used for its designated purpose.
- Do not carry out alterations or modifications to this product.
- This product is intended for indoor use only.
- This product is only suitable for well insulated places or occasional use.
- Clean only with a damp cloth. Do not use strong industrial cleaning substances or abrasive materials. Never clean while hot or in use. Make sure that the product has been turned off, cooled down and unplugged from the wall before doing so.
- Do not set the timer to long cycles unless you will be near the Turbo 2kw Convector Heater for an extended amount of time. This is to avoid potential fires.
- If the product is damaged or has any defects, please contact cservice@oypla.com

Operating Instructions

Parts List:

If you are missing any of the below parts please contact cservice@oypla.com

Please be aware that you will be referring to this parts list throughout the assembly process.

<p>Turbo Convector Heater</p>  <p>1pcs</p>	<p>Small Screw</p>  <p>6pcs</p> <p>Base Stand</p>  <p>2pcs</p>
--	--

⚡ WARNING ⚡

To reduce the risk of fire, electrical shock or injury when using the Turbo 2kw Convactor Heater, follow these basic precautions.

- Read all the instructions thoroughly before using the Turbo 2kw Convactor Heater
- Never allow children to operate, play with, or be in the immediate area of the Turbo 2kw Convactor Heater.
- Make sure that you turn the Turbo 2kw Convactor Heater off, unless you are using the timed mode. This is for your own safety and the safety of possessions.

Free Standing Installation

1. Hold the turbo convector heater upside down, removing the two screws that correlate with the holes on the base stand. After this, make sure to align the holes in the base stand with the holes on the bottom of the turbo convector heater.

2. Screw both of the small screws you just removed into any of the aligned holes (as pictured to the above left), this will allow for the base stand to be held in place against the turbo convector heater. Secure the base stand by screwing a small screw into the remaining aligned hole. Please see the image to the top right.

3. Once completed, the bottom of the convector heater should look similar to the image on the right.

Operating your Convector Thermostat

Choose a suitable location for the heater, taking into account the safety recommendations found in the "Safety Instructions".

Insert the plug into a suitable socket.

Turn the thermostat knob counter clockwise to the maximum setting.

Turn on the heating element, which is found on above the thermostat knob. To adjust the heating, turn the switch to I (750W) for low heating. Turn the switch to II (1250W) for medium heating. Turn the switch to III (2000W) for high heating.

When you are comfortable with the temperature in the room, slowly turn the thermostat anti-clockwise until you hear a click. The thermostat will now ensure that the room is kept at this temperature by automatically cycling itself on and off.

Operating your Convector Timer

Turn the timer clockwise onto the current time, making sure to align the time with the arrow.

Push the red points up, this creates an "ON" time.

Once the heater has reached the time, the heater will run until the time is over. You can increase the time using the red points if needed.

Operating your Convector Heater Fan

The convector heater incorporates an internal fan. The internal fan can be switched on independent of the heating elements.

The fan is operated by means of a fan switch, which only works with the thermostat in the "ON" position.

In warm conditions, the heating elements are "ON" and the fan is able to blow warm air into the room.

In cold conditions, the heating elements are "OFF" and the fan is able to blow warm air into the room.

Cleaning the Heater

Always turn the heater off and un-plug the heater from the wall socket, giving it time to cool down before cleaning.

Clean the outside of the heater by wiping with a damp cloth and buff with a dry cloth. As mentioned in the "Safety Instructions", do not use industrial cleaning substances or abrasive materials. Do not allow any water to enter the heater. Do not attempt to clean the plug.

Storing the Convector Heater

When storing the convector heater, make sure that the area is clean and dry. Ensure that the heater is handled with care to prevent potential damage.

Please retain a copy of all instructions for future consultation.
