

Gutter Brush

User Instructions

Notice: Ensure you read and fully understand instructions before use

While every attempt is made to ensure the highest degree of protection in all equipment, we cannot guarantee freedom from injury. The user assumes all risk of injury due to use. All merchandise is sold on this condition, which no representative of the company can waive or change.

- Before installation ensure that the gutters are free of any leaves or debris.
- The brushes should run continuously along the whole length of the guttering. Once the end of one brush has been reached, bend the excess wire at the end of each brush to form a hook and use this to link two or more brushes together to continue the length.
- If there is excess brush at the end of the gutter cut the excess off with a pair of wire cutters, making sure to leave approximately 50mm overrun. Untwist the wire to remove excess filaments, re-twist tightly and bend into a hook shape and secure into the gutter.
- After fitting, the brushes will not require cleaning for at least 5-7 years. All large objects such as leaves and sticks will not be allowed to enter the gutter so will perish and break down.
- After a short while the accumulation of dirt in the bottom of the gutter will be broken down. The decomposition and passage of rainwater will become a self-cleaning process.
- If the product is damaged or has any defects, please contact cservice@oypla.com

Please retain a copy of all instructions for future consultation.
